

# Touch Screen Trainer [T.S.T.]

Reconfigurable to multiple aircraft (Airbus, Boeing, Bombardier...)

Flight & Maintenance integrated training

Flexible & minimum hardware configuration

# T.S.T. Touch Screen Trainer

The TST (Touch Screen Trainer) is a flexible trainer allowing to run an FTD simulation on a low cost and Flexible Touch Screen hardware. The TST can handle more than 50% of required simulator time for a certified type rating (up to 66%), by doing all the ground phase for all procedure training.

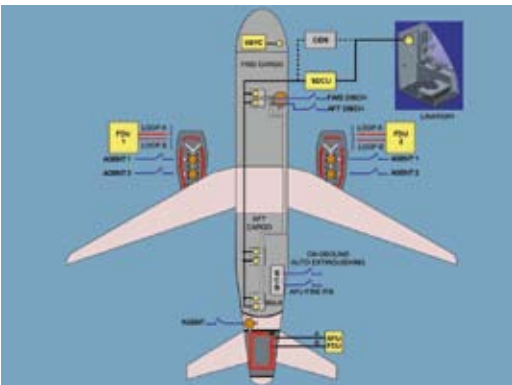

The same Trainer can host various simulations, such as A320 A330 B737-NG, B747-400 and CRJ. Maintenance training is also available.

This Flexible Trainer can host hardware replicas for CDU/MCDU, MCP/FCU, Throttles, control column/side Sticks, visuals, and others upon request. It is very easy to operate, with ordinary power supply, simple Windows knowledge is enough for all Maintenance operations, and if not, we can do the maintenance "on line" with a Web connection. You may use your own company flight database, run the CBT on side screens for a maximum efficiency.

## Benefits

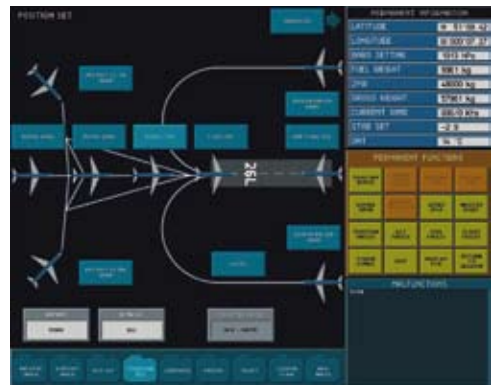

- Simulation at FFS level
- Great Flexibility
- Optimizes Training Time
- "In house "Training
- Easy Operation Maintenance
- Increases Ground phase Quality Training
- Low operating costs
- Malfunction list as in a FFS

## Schematics option

- Schematics linked to the simulation

## Instructor Operation Station

- User friendly IOS

## Hardware Options

## Side screen for CBT or any Courseware
