

Flight Training Device [Boeing Family]

THE INTELLIGENT TRAINING SOLUTION

BOEING FTD

AIRCRAFT

B737 B747

From its complete line of flight training devices for Boeing airframes, ECA FAROS offers airlines and training organizations a strong alternative to full-flight simulator training. Whether training to proficiency under AQP or building a training program for new hires, ECA FAROS trainers offer customers an unparalleled level of precision coupled with low acquisition, operation and life cycle costs.

BENEFITS

- Reduces full-flight simulator time
- Decreases overall training costs
- Quick return on investment
- Provides wide flexibility of training methods
- Low-pressure training environment

TRAINING EVENTS (partial list)

- FMS procedures
- Aircraft systems normal and abnormal
- Pre-flight and in-flight checklists
- Rapid descent
- Precision approaches
- Pick-list of systems malfunctions

FEATURES

- Realistic cockpit replica
- Modular architecture
- Accurate model of aircraft systems
- Runs on standard PC platform
- Accommodates customer navigation database
- Mobile Instructor Operator's Station (IOS)
- Worldwide customer support network

OPTIONS

- Visual system
- Flight controls
- Control loading
- Cockpit enclosure
- TCAS II
- Pin selectable options
